

Kristen Selikoff, MA

Senior GIS Analyst

Kristen Selikoff is the Senior GIS Analyst in our Southeastern Region and supports the Westervelt team by providing “all things geographic”. Her career began in the archaeology field, where she developed a penchant for cartography. She received an M.A. in Applied Geography from the University of North Carolina at Greensboro while working and teaching for the geography department. Her GIS roots were further established by working in local and regional government capacities as an analyst and manager, while also gaining experience in the planning, land conservation, and watershed studies fields.

Ms. Selikoff brought her technical skills back home to Alabama in 2008. Her talents range from GPS database design and collection, open source and cloud-based GIS application creation, to high volume cartographic production, as well as field research support. Ms. Selikoff has been involved in every facet of managing and implementing a GIS system; including budgeting and procurements, personnel management and instruction, project planning and GIS analysis. In addition, she is our IT support liaison and she enjoys delving into business analytics in support of our sales and marketing staff.
